(54) Title: **DISPERSION FORMULATIONS CONTAINING LIPASE INHIBITORS**

01/19340 A1

Dispersion formulations containing lipase inhibitors

The present invention relates to pharmaceutical compositions comprising lipase
5 inhibitors.

Examples of such lipase inhibitors are lipstatin and orlistat. The latter is also known as tetrahydrolipstatin or THL and is derived from a natural product excreted by *Streptomyces toxytricini*. This class of compounds was found to exhibit in vitro as well as in vivo activity against various lipases, such as lingual lipase, pancreatic lipase, gastric
10 lipase, and carboxylester lipase. Its use for the control or prevention of obesity and hyperlipidemia is described, for instance, in US Patent No, 4,598,089.

Orlistat is currently administered at doses of 120 mg per meal and dosing is independent of the body mass of the human subject. Orlistat acts locally in the gastrointestinal (GI) tract and prevents lipase from digesting triglycerides and
15 subsequently inhibits the formation of absorbable lipid degradation products. For this reason, systemic availability of the lipase inhibitors is not required and, instead, local residence in the gastrointestinal tract is preferred.

Lipase inhibitor compositions currently administered inhibit around 30% of fat absorption after consumption of a mixed meal; an increase of the lipase inhibitors
20 concentration in the pharmaceutical composition does not increase its clinical efficacy while the intensity of local side effects increases.

Anal leakage of oil (oily spotting) is an adverse effect which is occasionally observed in patients treated with lipase inhibitors. This phenomenon reflects physical separation of some liquid unabsorbed dietary fat from the bulk of solids in the lower large intestine.

The problem at the root of the present invention is therefore to provide lipase
5 inhibitor compositions which are able to improve the clinical efficacy and/or potency of the inhibitor itself, and/or to minimize or suppress the above mentioned disadvantages.

The problem is solved, according to the present invention, by a pharmaceutical composition containing at least one inhibitor of lipases, at least one surfactant and at least one dispersant.

10 "Dispersants" or "dispersing agents" are materials that facilitate the initial disintegration of the composition and promote further fine distribution in the environment.

A "surfactant" (surface-active agent) is a substance such as a detergent that, when added to a liquid, reduces the surface tension between a lipophilic and a hydrophilic
15 phase. The surface-active molecule must be partly hydrophilic (water-soluble) and partly lipophilic (soluble in lipids, or oils). It concentrates at the interfaces between water and oil, or lipids, to act as an emulsifying agent, or foaming agent. Preferred surfactants are anionic, non-ionic and zwitterionic surfactants.

The term "lipase inhibitor" or inhibitor of lipases" refers to compounds which are
20 capable of inhibiting the action of lipases, for example gastric and pancreatic lipases. For example orlistat and lipstatin as described in U.S. Patent No. 4,598,089 are potent inhibitor of lipases. Lipstatin is a natural product of microbial origin, and orlistat is the result of a hydrogenation of lipstatin. Other lipase inhibitors include a class of compounds commonly referred to as panclicins, analogues of orlistat. The term "lipase inhibitor"
25 refers also to polymer bound lipase inhibitors for example described in International Patent Application WO99/34786 (Geltex Pharmaceuticals Inc.). These polymers are characterised in that they have been substituted with one or more groups that inhibit lipases. The term "lipase inhibitor" also comprises pharmaceutically acceptable salts of these compounds. The term "lipase inhibitor" preferably refers to orlistat.

30 Orlistat is a known compound useful for the control or prevention of obesity and hyperlipidemia. See, U.S. Patent No. 4,598,089, issued July 1, 1986, which also discloses processes for making orlistat and U.S. Patent No. 6,004,996, which discloses appropriate pharmaceutical compositions. Further suitable pharmaceutical compositions are described

for example in International Patent Applications WO 00/09122 and WO 00/09123. Additional processes for the preparation of orlistat are disclosed in European Patent Applications Publication Nos. 185,359, 189,577, 443,449, and 524,495.

Orlistat is preferably orally administered from 60 to 720 mg per day in divided doses
5 two to three times per day. Preferred is herein from 180 to 360 mg, most preferably 360 mg per day of a lipase inhibitor is administered to a subject, preferably in divided doses two or, particularly, three times per day. The subject is preferably an obese or overweight human, i.e. a human with a body mass index of 25 or greater. Generally, it is preferred that the lipase inhibitor be administered during the meal containing fat. Generally, for
10 administering a lipase inhibitor as defined above it is preferred that treatment be administered to a human who has a strong family history of obesity and has obtained a body mass index of 25 or greater.

It has surprisingly been found that administering a lipase inhibitor in a composition containing at least one surfactant and at least one dispersant clearly improves the efficacy
15 and/or potency of the lipase inhibitor itself. Furthermore, the inter-subject variability in efficacy and/or potency is reduced, as well as the frequency and intensity of side effects.

The pharmaceutical compositions according to the present invention have been found to exhibit very favorable effects when applied orally during meal intake in humans. Surprisingly, an increased efficacy and/or potency compared to the already known
20 compositions was observed. Furthermore, the compositions according to the present invention induce less unpleasant side effects in the single meal test (see Example 1) than the already known compositions, despite the greater amount of fat which remains unabsorbed. During the single meal studies with human subjects, it was observed that the stools obtained after intake of compositions according to the present invention show less
25 separation of oil from the main stool mass as compared to the conventional compositions. This was unexpected, as equal or higher amounts of fat were present in the collected stools.

According to the present invention, the lipase inhibitor, preferably an inhibitor of gastrointestinal and pancreatic lipases, most preferably orlistat, is present in an amount varying from 1 to 50%, preferably 5 to 30%, of the total weight of the composition.

30 The presence of at least one surfactant is essential for obtaining an optimal particle distribution in the stomach. In a preferred embodiment of the present invention, the surfactant is selected from the group consisting of anionic surfactants, non-ionic surfactants, zwitterionic surfactants and mixtures thereof. Most preferred are surfactants

chosen among the group consisting of vitamin E polyethylene glycol 1000 succinate (TPGS), poly(oxyethylene)sorbitan fatty acid esters, poly(oxyethylene)stearates, poly(oxyethylene)alkyl ethers, polyglycolized glycerides, poly(oxyethylene)castor oils, sorbitan fatty acid esters, poloxamers, fatty acid salts, bile salts, alkylsulfates, lecithins, mixed micelles of bile salts and lecithins, sugar esters and mixtures thereof.

"Poly(oxyethylene)sorbitan fatty acid esters" are commercially available and refer to mono-, di- or tri-ester of sorbitan with fatty acids (C8 to C18), e.g. POE(20) sorbitan monolaurate (Polysorbate 20), POE(20) sorbitan monopalmitate (Polysorbate 40), POE(20) sorbitan monostearate (Polysorbate 60), POE(20) sorbitan tristearate (Polysorbate 65), POE(6) sorbitan monostearate (PEG-6 Sorbitan Stearate), POE(20) sorbitan monooleate (Polysorbate 80), POE(20) sorbitan trioleate (Polysorbate 85), POE(6) sorbitan monooleate (PEG-6 sorbitan oleate), and POE(20) sorbitan monoisostearate (PEG-20 Sorbitan Isostearate).

The term "polyoxyethylene stearates" refers to polyoxyethylene glycol esters with stearic acid, e.g. PEG 22 stearate, PEG 32 stearate, and PEG 40 stearate. These compounds are known in the art and commercially available, e.g. the Myrj class.

The term "poly(oxyethylene)alkyl ethers" refers to ether composed of polyoxyethylene and alkyl groups, e.g. POE(7) C12-14 alkyl ether, POE(9) C12-14 alkyl ether, POE(3)C12-14 alkyl ether, and POE(9)C12-14 alkyl ether, e.g. the Brij class.

"Polyglycolized glycerides" are surfactants made by a) a saponification of oils and b) a re-esterification of the fatty acids with polyethyleneglycol (PEG), e.g. the Gelucire class; or mixtures of glycerides with poly(oxyethylene)fatty acid esters.

The term "poly(oxyethylene)castor oils" refers to castor oil which has been reacted with polyethyleneglycol, e.g. polyoxyl 35 castor oil (Cremophor EL), PEG-30 castor oil, PEG-40 castor oil, PEG-25 hydrogenated castor oil, and PEG-40 hydrogenated castor oil (Cremophor RH).

The term "fatty acid salts" refers to pharmaceutically acceptable salts of C12 to C18 fatty acids, preferably natural fatty acids, e.g. Na-oleate.

The term "alkyl sulfates" refers to C12 to C18 alkylsulfates, e.g. sodium dodecylsulfate.

The term "sorbitan fatty acid esters" refers to esters of C12 to C18 fatty acids, preferably natural fatty acids, like sorbitan laurate, sorbitan oleate, sorbitan palmitate, sorbitan stearate, sorbitan tristearate, sorbitan trioleate, etc.

5 The term "lecithin" refers to natural or synthetic lecithin. A lecithin has the following structure:

wherein R¹-COOH and R²-COOH are fatty acids R¹-COOH and R²-COOH as defined above (see definition for fatty acid salts).

10 Lecithins may be chosen from the group consisting of natural lecithin, synthetic lecithin, sojalecithin, egglecithin, synthetic dipalmitinlecithin, partially or fully hydrogenated lecithin and mixtures thereof.

The term "bile salts" refers to pharmaceutically acceptable salts, e.g. sodium salts, of bile acids, e.g. cholate, as well as conjugated bile acids, e.g. Na-glycocholate.

15 The term "sugar esters" refers to esters of sugars with fatty acids, e.g. C12 - C18 fatty acids, e.g. fatty acids of sucrose like sucrose stearate or sucrose palmitate.

The term "poloxamer" refers to a block-polymer of poly(ethyleneglykols) and poly(propyleneglykols), e.g. of general formula

with a is 2 - 130, b is 15 - 67.

The above compounds are known in the art and commercially available.

20 The term "pharmaceutically acceptable" as used herein means that the excipients are acceptable from a toxicity viewpoint.

Preferred surfactants may be selected from the group consisting of vitamin E poly(ethylene glycol)1000 succinate, e.g. TPGS, Eastman Chemicals; poly(ethoxylated)castor oil, e.g. Cremophor EL, BASF; and polyethylene glycol 40 stearate, Myrj 52, Serva; Crodet S40, Croda.

- 5 The surfactants are usually present in an amount of at least 0.1% of the total weight of the composition, preferably in an amount of 0.1 to 90%, more preferably in an amount of 1 to 20%.

- The presence of at least one dispersant is important for accelerating the initial dispersion of the materials in the physiological milieu where the lipase inhibitor must act.
- 10 Dispersants can be chosen from water and lipid soluble compounds. They are usually present in an amount of at least 5% of the total weight of the composition, preferably in amounts varying between 5 and 70% of the total weight of the composition.

- One embodiment of the present invention refers to water soluble dispersants. Suitable water soluble dispersing agents can be found in the group consisting of sugars, sugar alcohols, alcohols, effervescent, disintegrants, and mixtures thereof. More preferred
- 15 dispersants may be chosen from the group consisting of glucose, sorbitol, mannitol, maltodextrin, lactose, sucrose, polyethyleneglycol, glycerol, triacetin, glycofurol, effervescent, , e.g. NaHCO_3 /acid mixtures, e.g. NaHCO_3 /citric acid, and mixtures thereof. Most preferred water soluble dispersants are sorbitol, mannitol, maltodextrin, lactose,
- 20 sucrose, polyethyleneglycol, e.g. polyethyleneglycol 100 – 10000, more preferably polyethyleneglycol 400 – 6000, e.g. polyethyleneglycol 400, glycerol, triacetin, glycofurol and mixtures thereof. Gammascintigraphic studies have shown that effervescent mixtures (NaHCO_3 /citric acid) have pronounced effects on the dispersion of content of hydroxypropylmethylcellulose (HPMC) capsules in the stomach.

- 25 Some of the compositions of the invention comprising lipid soluble compounds as dispersion agents are known as Self-Emulsifying Drug Delivery Systems (SEDDS). SEDDS have the particular characteristic of emulsification of oily components under conditions of gentle agitation and resulting in micro- or submicron emulsions. A description of compositions of SEDDS can be found for instance in C. W. Pouton, *Advanced Drug*
- 30 *Delivery Reviews*, 25, (1997), 47-58. It has been observed that, after dispersion in aqueous environment, SEDDS can separate into a clear micellar phase and in a lipid droplet emulsion, wherein in presence of the lipase inhibitor, the inhibitor is present in both phases.

Accordingly, another aspect of the present invention are pharmaceutical compositions as described above comprising at least one dispersant which is a lipid soluble compound and is liquid at the body temperature.

According to the present invention the lipid soluble dispersing agent is preferably applied in amounts varying between 20 and 90% of the total weight of the compositions and must be liquid at the body temperature (i.e. $>37^{\circ}\text{C}$). The dispersants can be chosen among the group consisting of triglycerides, diglycerides, monoglycerides, mixtures of di/mono/triglycerides, vitamin E, tocophero acetate, terpenes, squalene and mixtures thereof, more preferably the lipid soluble compound is chosen from the group consisting of triglycerides, diglycerides, monoglycerides, mixtures of di/mono/triglycerides, vitamin E, tocopherol acetate, and mixtures thereof. Preferred examples are medium chain triglycerides or mixtures of medium chain triglycerides, e.g. fractionated coconut oil (Medium Chain Triglycerides, MCT, e.g. Miglyol 812, Hüls AG, Neobee M-5, Stepan, Captex 355, Abitec). Preferably, the compositions according to the present invention may further comprise an additional surfactant (co-surfactant).

The term or "glyceride" refers to an ester of glycerol with fatty acids with 2 to 7 (short; short chain glycerides), 8 to 12 (medium; medium chain glycerides) and >12 (long; long chain glycerides) carbon atoms. Examples are glyceryl trilaurate, glyceryl tristearate, etc. Examples for diglycerides are glyceryl dilaurate, glyceryl distearate, etc. Examples for monoglycerides are glyceryl monolaurate and glyceryl monostearate. The invention also comprises the corresponding mixtures of mono-, di- and triglycerides.

The compositions according to the present invention can be administered using conventional dosage forms such as hydroxypropylmethylcellulose (HPMC) capsules, soft gelatin capsules, hard gelatin capsules, starch capsules, tablets, chewable tablets and capsules, syrups, etc.

The invention is useful with any inhibitor of lipases, but is especially useful for inhibitors of the gastric and pancreatic lipase and, in particular, for the active compound orlistat. A preferred composition of the present invention comprises

- a) 1 to 50% lipase inhibitor of the total weight of the composition
- b) 5 to 70% of at least one dispersant of the total weight of the composition
- c) 0.1 to 90% of at least one surfactant of the total weight of the composition, and optionally
- d) one or more pharmaceutically acceptable excipient(s).

More preferably, the lipase inhibitor, e.g. orlistat, is present in an amount of 3 – 30% and the surfactant in an amount of 1 – 20%. The present invention relates also to a process for preparing pharmaceutical compositions as described above, which process comprises mixing at least one inhibitor of lipases with at least one surfactant and at least one
5 dispersant.

A further aspect of the present invention is to provide a method for controlling or preventing obesity comprising the step of administering to a patient a pharmaceutical composition as described above.

The invention also relates to the use a composition as defined above for the
10 preparation of a medicament for the prevention and treatment of obesity.

The invention will be now illustrated in details by the following examples.

The efficacies on fat excretion of orlistat compositions according to examples 1-7 and of Xenical® as a reference are reported in table 1.

EXAMPLES

Example 1

150 mg of MCT (Medium Chain Triglycerides, fractionated coconut oil, Miglyol
5 812, Hüls AG; Neobee M-5, Stepan; Captex 355, Abitec) and 120 mg vitamin E
polyethylene glycol 1000 succinate (TPGS, Eastman Chemicals) were weighed into a glass
container and mixed by heating/stirring at 45°C. 30 mg orlistat were then dissolved in the
so obtained clear liquid and stirred till homogeneity. 200 mg of finely milled effervescent
vitamin C tablets were added under stirring and upon cooling to room temperature
10 (25°C), wherein the mixture solidified. The so obtained composition was filled into
hydroxypropylmethylcellulose capsules.

Capsules containing 60 mg orlistat in the above composition were applied to human
volunteers during a single meal test. Human subjects consumed a meal consisting of 130 g
hamburger meat, 10 g butter and 100 g French fries (fried in peanut oil) and containing
15 overall about 35 g fat. Stools were collected from day -1 (a day before eating the single
meal) until day 5 after the test meal. The first and the last stools were employed to assess
background fat excretion. Stools were stored frozen and extracted for total lipid according
to Bligh and Dyer (Bligh, E.G., and Dyer, W.J., *Can. J. Biochem. Physiol.*, 37, (1959), 911).
Background excretion of lipids was subtracted to obtain the amount of fat excreted due to
20 the orlistat treatment. The excreted fat was quantified by gravimetry and expressed as
percentage of the fat content of the test meal.

Example 2

A composition consisting of 180 mg Cremophor EL (polyethoxylated castor oil,
25 BASF), 60 mg MCT, 60 mg orlistat and 200 mg of finely milled effervescent vitamin C
tablets was obtained according to the preparation described in example 1.
Hydroxypropylmethylcellulose capsules containing each 60 mg orlistat in the above
composition were applied to human volunteers according to the method described in
example 1.

Example 3

A composition consisting of 450 mg Gelucire 44/14 (lauroyl macrogol-32 glycerides, Gattefossé, France), 90 mg MCT, 60 mg orlistat and 200 mg of finely milled effervescent vitamin C tablets was obtained according to the preparation described in example 1.

- 5 Hydroxypropylmethylcellulose capsules containing each 60 mg of orlistat in the above composition were applied to human volunteers according to the method described in example 1.

Example 4

- 10 The composition of example 1 was prepared, except that instead of an effervescent mixture, 200 mg finely milled glucose was used as an additional excipient. Hydroxypropylmethylcellulose capsules containing each 30 mg of orlistat in the above composition were applied to human volunteers according to the method described in example 1.

15

Example 5

A composition consisting of 1700 mg TPGS and 300 mg orlistat were added to a planet-mixer in which the metal beaker was warmed to 60°C. After melting, the mixture was stirred and 10 g of solid sorbitol was added while continuously stirring at 150 rpm.

- 20 The stirring was continued for 30 minutes during which time the preparation cooled down to room temperature. Afterwards, the solid mixture was sieved through a 2mm sieve. Hydroxypropylmethylcellulose capsules containing each 30 mg of orlistat in the above composition were applied to human volunteers according to the method described in example 1.

25

Example 6

210 mg polyethylene glycol 400 (PEG 400, Clariant) were mixed with 300 mg glycerol. 30 mg polyethylene glycol 40 stearate (Myrj 52, Serva Germany; Crodet S40, Croda UK) were added. The mixture was heated to 60 °C and subsequently cooled down to room temperature under stirring. 60 mg orlistat were then added to the so obtained suspension and stirred till homogeneity. The so obtained composition was filled into

30

hydroxypropylmethylcellulose capsules. Capsules containing 60 mg orlistat in the above composition were applied to human volunteers according to the method described in example 1.

5

Example 7

340 mg glycerol were mixed with 30 mg poly(ethylene glycol)40 stearate. The mixture was heated to 60 °C and subsequently under stirring cooled down to room temperature. 30 mg orlistat, 100 mg poly(ethylene glycol)400 (PEG 400) and 100 glucose were then added to the so obtained solution and stirred till homogeneity.

- 10 Hydroxypropylmethylcellulose capsules containing 30 mg orlistat in the above composition were applied to human volunteers according to the method described in example 1.

As shown in Table 1, the efficacy and/or potency of the compositions according to the present invention is much higher than that of conventional formulations.

- 15 Compositions according to the invention containing just the half or even a quarter of the lipase inhibitor of the known composition are much more efficacious and/or potent. For the same lipase inhibition degree, it is now possible to strongly decrease the amount of active compound in the composition, thus minimizing undesired side effects.

- 20 Table 1 shows also the number of stool samples containing free oil for each of the above compositions. Stool samples obtained after intake of compositions according to the present invention show no or just occasional separation of oil from the main stool mass. The compositions according to the present invention enable therefore to minimize or completely suppress anal leakage of oil which is one of the most undesired side effect of the prior art compositions.

25

Table 1: In vivo results

Example	Orlistat dose (mg)	Excreted fat (%) ⁽¹⁾	n ⁽²⁾	Free oil in stool samples ⁽³⁾
Reference	120 mg (Xenical [®])	41.8 ± 11.5	18	9/18
1	60 mg	64.5 ± 3.0	5	1/5
2	60 mg	72.0 ± 3.4	5	0/5
3	60 mg	61.1 ± 10.0	4	0/5
4	30 mg	39.9 ± 11.4	5	0/5
5	30 mg	57.6 ± 27.8	5	0/5
6	60 mg	53.7 ± 13.0	5	0/5
7	30 mg	26.5 ± 9.9	5	0/5

⁽¹⁾ percentage of excreted fat as percentage of fat intake.

⁽²⁾ number of volunteers subjected to the experiments

⁽³⁾ number of stool samples containing free oil/number of volunteers

CLAIMS

1. A pharmaceutical composition comprising at least one lipase inhibitor, at least one surfactant and at least one dispersant.
- 5 2. The pharmaceutical composition according to claim 1, wherein the surfactant is selected from the group consisting of anionic surfactants, non-ionic surfactants, zwitterionic surfactants and mixtures thereof.
3. The pharmaceutical composition according to claim 2, wherein the surfactant is selected from the group consisting of vitamin E(polyethylene glycol 1000)succinate
10 (TPGS), poly(oxyethylene)sorbitan fatty acid esters, poly(oxyethylene)stearates, poly(oxyethylene)alkyl ethers, poly(oxyethylene)castor oils, poly(glycolized)glycerides, sorbitan fatty acid esters, poloxamers, fatty acid salts, bile salts, alkylsulfates, lecithins, mixed micelles of bile salts and lecithins, sugar esters and mixtures thereof.
4. The pharmaceutical composition according to claim 3, wherein the surfactant is
15 selected from the group consisting of vitamin E(polyethylene glycol 1000)succinate (TPGS), poly(ethoxylated)castor oil, and poly(ethylene glycol 40)stearate.
5. The pharmaceutical composition according to any of claims 1 to 4, wherein the surfactant is present in an amount of at least 0.1% of the total weight of the composition.
- 20 6. The pharmaceutical composition according to claim 5, wherein the surfactant is present in an amount of 0.1 to 90 % of the total weight of the composition.
7. The pharmaceutical composition according to claims 1 to 6, comprising a water soluble dispersant.
8. The pharmaceutical composition according to claim 7, wherein the dispersant is
25 chosen from the group consisting of sugars, sugar alcohols, alcohols, effervescent, disintegrants and mixtures thereof.
9. The pharmaceutical composition according to claim 8, wherein the dispersant is chosen from the group consisting of glucose, sorbitol, mannitol, maltodextrin, lactose, sucrose, polyethylenglycol, glycerol, triacetin, glycofurol, effervescent, and mixtures
30 thereof.

10. The pharmaceutical composition according to claim 8 or 9, wherein the dispersant is chosen from the group consisting of sorbitol, mannitol, maltodextrin, lactose, sucrose, polyethylenglycol, glycerol, triacetin, glycofurol and mixtures thereof.
- 5 11. The pharmaceutical composition according to any one of claims 1 to 10, comprising at least one dispersant which is a lipid soluble compound that is liquid at the body temperature.
- 10 12. The pharmaceutical composition according to claim 11, wherein the lipid soluble compound is chosen from the group consisting of triglycerides, diglycerides, monoglycerides, mixtures of di-, mono- and triglycerides, vitamin E, tocopherol acetate, terpenes, squalene and mixtures thereof.
13. The pharmaceutical composition according to claim 12, wherein the lipid soluble compound is chosen from the group consisting of triglycerides, diglycerides, monoglycerides, mixtures of di/mono/triglycerides, vitamin E, tocopherol acetate, and mixtures thereof.
- 15 14. The pharmaceutical composition according to claim 13, wherein the lipid soluble compound is a medium chain triglyceride or a mixture of medium chain triglycerides.
15. The pharmaceutical composition according to any of claims 1 to 14, wherein the dispersant is present in an amount of at least 5% of the total weight of the composition.
- 20 16. The pharmaceutical composition according to claim 15, wherein the dispersant is present in amounts varying between 5 and 70% of the total weight of the composition.
17. The pharmaceutical composition according to any of claims 1 to 16, wherein the lipid soluble dispersant is present in an amount varying between 20 and 90% of the total weight of the composition.
- 25 18. The pharmaceutical composition according to any of claims 1 to 17, further comprising an additional co-surfactant.
19. The pharmaceutical composition according to any of claims 1 to 18, wherein the inhibitor of lipases is an inhibitor of gastrointestinal and pancreatic lipases.
- 30 20. The pharmaceutical composition according to claim 19, wherein the inhibitor of gastrointestinal lipases is orlistat.

21. The pharmaceutical composition according to any of claims 1 to 20, wherein the lipase inhibitor is present in an amount varying from 1 to 50% of the total weight of the composition.
22. The pharmaceutical composition according to claim 21, wherein the lipase inhibitor is present in an amount varying from 5 to 30% of the total weight of the composition.
23. The pharmaceutical composition according to claims 1 –21, further comprising pharmaceutically acceptable excipients selected from the group consisting of carbohydrates, antioxidants, co-solvents, as well as thickening agents, preservatives, and lubricants.
24. The pharmaceutical composition according to any of claims 1 – 23 comprising
 - a) 1 to 50 % lipase inhibitor of the total weight of the composition
 - b) 5 to 70 % of at least one dispersant of the total weight of the composition
 - c) 0.1 % to 90 % of at least one surfactant of the total weight of the composition, and optionally
 - d) one or more pharmaceutically acceptable excipient(s).
25. A process for preparing a pharmaceutical composition according to any one of claim 1 to 24, comprising mixing at least one inhibitor of lipases with at least one surfactant and at least one dispersant.
26. Use of a pharmaceutical composition as claimed in any one of claim 1 to 24 for controlling or preventing obesity.
27. A method for controlling or preventing obesity comprising the step of administering to a patient a pharmaceutical composition as claimed in any one of claims 1 to 24.
28. Use of a composition as defined in any of claims 1 to 24 for the preparation of a medicament for the prevention and treatment of obesity.
29. The invention as hereinbefore described.

INTERNATIONAL SEARCH REPORT

International Application No
PCT/EP 00/08858

A. CLASSIFICATION OF SUBJECT MATTER
IPC 7 A61K9/10 A61K31/365

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 7 A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)
EPO-Internal, WPI Data, PAJ, BIOSIS, CHEM ABS Data, EMBASE, MEDLINE

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 98 34607 A (HOFFMANN LA ROCHE) 13 August 1998 (1998-08-13) cited in the application page 3, line 3 - line 22 page 8 -page 9; example 3 page 12 -page 13; example 6	1-3, 5-16, 19-29
X	WO 98 34630 A (HOFFMANN LA ROCHE) 13 August 1998 (1998-08-13) page 5; example 3	1-3, 5-10, 15, 16, 19-29

☐ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

A document member of the same patent family

Date of the actual completion of the international search

6 February 2001

Date of mailing of the international search report

20/02/2001

Name and mailing address of the ISA
European Patent Office, P.B. 5818 Patentlaan 2
